Hiring Manager

Coherent Corp.

Dear Hiring Manager,

Subject : Application for Software Engineer-Intern

I am deeply enthusiastic about pursuing the Software Engineer Internship position at Coherent Corp. My third year at SNS College of Engineering studying Artificial Intelligence and Data Science, in Coimbatore drives my desire to join the Coherent Corp., as I want to use my technical abilities in a professional setting that offers practical work experience.

My education and experience in Python, JavaScript, MongoDB, and full-stack development prepared me to work on projects that included building the Speech Emotion Recognition App with TensorFlow Lite Kivy and librosa. Through my Skolar internship I developed web applications by using Node.js, React and MongoDB which strengthened my ability to implement open-source software in scalable applications. The duties of this role match my existing expertise in troubleshooting code and debugging systems together with my ability to adapt to new technologies.

The opportunity at Coherent Corp. is most appealing because of its deep dedication to both innovation and collaborative work culture. I bring high adaptability coupled with my desire to learn and my drive to support development of the next-generation platform which will serve users worldwide. My ability to work independently matches my ability to work effectively with teams thus I guarantee efficiency in development tasks and problem-solving activities.

I am interested in speaking about my competencies to support your team needs. A copy of my resume accompanies this message for your assessment. Your response will be highly appreciated as I eagerly await to hear back from you.

Sincerely,

Naren C
